THE SATURDAY 60 — How to Ask Claude for a Class

Plain words work. Name what matters this week, and everything you leave out falls back to the defaults in the right-hand column of section 3. Say **"this week"** for a one-off and **"from now on"** to change the rulebook. The rules that always ride along: RPM beat-locked (1:1 or ½) · 110 RPM ceiling · never stand above 85 RPM · no explicit versions · a gear change only with a zone change · no standing up into a higher zone (climbing once standing is fine) · no interval under 0:15 · the last block ends on a fast flat · PLAYLIST FIRST — MUSIC LEADS

1 — START A CLASS: FIVE WAYS IN

	THE WAY IN	SAY IT LIKE THIS	WHAT HAPPENS
1	**You pick the songs** (the standing default)	"Here's my playlist for November 21st, six blocks: [Spotify link]" — or paste the titles in ride order, or attach an Exportify CSV.	Claude maps your songs in your order and tells you if any song sits outside its block's BPM band or is an explicit version.
2	**Claude picks everything**	"You pick everything for the November 21st class. Eight segments."	Claude chooses the songs, puts them in a playlist in your Spotify, maps every song, scores the TSS.
3	**Fill in the rest**	"I want Uptown Funk in the Sprints and Africa in the Warm-Up — fill in the rest."	Your songs stay where you put them; Claude picks the others around them.
4	**Remap or fix a class**	"Remap Nov 14 as six blocks." · "Re-time Nov 21 — the Exportify CSV is attached."	Claude rebuilds from the saved plan and keeps everything you didn't mention.
5	**Copy a MOWL workout**	"Rebuild this workout from these screenshots." (MOWL's **Details by segments** tables)	An interval-for-interval copy as a MOWL import file. ACC and RPM don't import; re-mark them in Session Designer.

2 — ALWAYS SAY THESE TWO: THE DATE AND THE LAYOUT

1	**The date**	"for Saturday, November 21st" — it names the Spotify playlist ("November 21st Spin 60 mins") and the MOWL workout. Leave it out and Claude asks.
2	**The layout**	"six blocks" — Warm-Up 10 · Endurance / Tempo 10 · Hill Climb 12 · Sprints 10 · Mixed Terrain Finisher 12 · Cool-Down 6. "eight segments" — the same six blocks plus **Bridge 1** (~18:00–20:00) and **Bridge 2** (~30:00–32:00); the blocks around them shorten so the class still ends at 60:00. Leave it out and Claude asks. The Build Sheet opens on six blocks; **Reset to eight segments** adds the bridges.

3 — THE DIALS: WHAT YOU CAN CHANGE FOR ONE CLASS

DIAL	SAY IT LIKE THIS	DEFAULT — IF YOU DON'T SAY
TSS how hard	"TSS around 80" · "easy week, TSS about 70" · "push it to the 85 cap" · "let it go to 90 this week" (Claude will point out that it's over your cap)	75–85, cap 85, counted over the first 60 minutes. Claude reports the number; MOWL usually reads a point or two lower.
Texture how it feels	"more zone changes, like my old classes" · "keep it to the sheet's RPE" (softer, about 64 TSS) · "no Z5 outside the Sprints" · "add a Z6 sprint set" · "more standing" · "all seated" · "top the climb at RPE 8"	Fewer zone changes: the effort changes only at each song's big moments and holds in between, with two seated accelerations per warm-up song on its choruses. Z5 ceiling, one big Z5 block, every segment ends high.
Total length	"make it 45 minutes" · "a 75-minute class" · "end it at 58:00"	60:00 with the cool-down inside it. Shorter: the blocks shrink in proportion and so does the TSS band (45 min ≈ 56–64) unless you name a target. Longer: the first 60 still lands in 75–85, and you get both numbers.
Cool-down	"a 10-minute cool-down" · "two slow songs to cool down" · "let the cool-down run past 60 like my own classes" (the file runs ~62–65 min)	6 minutes, 54:00–60:00, one easy interval that MOWL shows as its teal Cooldown.
Era	"year 2000 forward" · "1975 to 1995" · "only the 80s" · "the last five years"	Any era.

DIAL	SAY IT LIKE THIS	DEFAULT — IF YOU DON'T SAY
Genre	"classic rock" · "Motown and soul" · "country" · "dance remixes" · "no rap" · "half pop, half rock"	A mix, mostly pop, rock and dance.
Theme	"Halloween" · "Thanksgiving" · "Veterans Day" · "one-hit wonders" · "movie songs" · "a color in every title"	No theme.
Song source	"from my Liked Songs" (attach a fresh Exportify CSV if it has changed) · "from this playlist: [link]" · "anything on Spotify"	Anything on Spotify.
Must / must not	"include Hey Ya" · "open with Mr. Blue Sky" · "nothing from Nov 7 or Nov 14" · "no Taylor Swift" · "one song per artist"	Nothing forced or barred except explicit versions (a clean edit of the same song is fine).
Song count	"short dance remixes like my own classes" (about 22–24 songs) · "fewer, longer songs"	About 16–18 songs.
Hill Climb Block 2	"Pyramid" · "Single Long Climb" · "Climb + Surge"	Claude picks the variant that suits the songs and names it.
Sprints Block 3	"Sprint Pyramid" (15-30-45-30-15) · "more sprints, shorter" · "longer rests this week"	The Sprint Pyramid, mapped onto the songs.
Finisher	"all climbs" · "end on a sprint" · "climb, flat, climb, flat"	Climb songs (½ time, 120–126) and flat songs (on the beat, 75–110) take turns, by whole song, ending on a fast flat: a seated Z5 surge to the end of the last song.
Bridges eight only	"movie themes on the bridges" · "80s TV themes" · "Cheers and Jeopardy" · "no bridges" (= six blocks)	TV or game-show themes, 1:30–2:00 each, free easy spin. Each one is where you split the workout in MOWL.
What comes back	"just the song list first — I'll approve before you map" · "skip the Spotify playlist" · "no MOWL file, it's for the Y"	Everything: the Spotify playlist, the Build Sheet code, the MOWL import file, the TSS, a where-the-work-lands table, and flags for anything the timings couldn't pin down.

4 — CHANGING A CLASS AFTER IT'S BUILT

	THE CHANGE	SAY IT LIKE THIS
1	**Swap a song**	"Swap Burn for something in the same BPM band" · "Replace song 7 with Believer"
2	**Move a song**	"Move Valerie to the Finisher" · "Put Hey Brother before Higher Love"
3	**Easier or harder**	"Bring the TSS down to 78" · "A harder climb, same total" · "An easier warm-up" — when it's over the cap, the warm-up, builds and recoveries ease first; the big finishes are cut last.
4	**Fix a drop**	"Rolling in the Deep: chorus 1 starts at 1:15.6, bar 33.1" — your bar readings beat the lyric timings.
5	**Re-time to the real tracks**	Attach an Exportify CSV of the playlist: exact lengths and Explicit flags. Needed whenever a version or length differs.
6	**Change the layout**	"Rebuild Nov 21 as eight segments" · "Drop the bridges"
7	**Change the bridge music**	"Swap the Cheers bridge for the Jeopardy think music"
8	**Apply a new rule to an old class**	"Redo Nov 14 under the gear rule"
9	**One cue's wording**	Quicker to do yourself: edit the words after the zone in that song's Intervals cell on the Build Sheet.

How to point at things. Blocks by name — Warm-Up, Endurance / Tempo, Bridge 1, Hill Climb, Bridge 2, Sprints, Finisher, Cool-Down. Songs by title or by the Build Sheet's # column ("song 7"). Effort as a zone (Z1–Z7) or an RPE (1–10; the RPE card maps 1–2 = Z1, 3–4 = Z2, 5 = Z3, 6–7 = Z4, 8 = Z5, 9 = Z6, 10 = Z7). Times either **in the song** ("0:59 into Rolling in the Deep") or on the **ride clock** ("32:57" — the MOWL time on the Cue Print and the Build Sheet's Σ). Say which one.

5 — WHAT CLAUDE NEEDS FROM YOU, AND WHAT YOU DO AFTER

BEFORE

1. The date and the layout (Claude asks for whichever is missing).
2. Your songs — or "you pick".
3. For the Spotify playlist: the Claude desktop app open on your computer, signed in to open.spotify.com in its built-in browser. Claude adds the tracks in order and reads the playlist back to check them.
4. An Exportify CSV when Claude asks for one (exact lengths, Explicit flags).

AFTER

1. Spotify: make the playlist **Public** and **download it** for offline.
2. Build Sheet: **Backup**, then **Import** ← **Build Sheet** and paste the code.
3. MOWL: upload the file at `login.mowl.com/profile/import`, link the music, nudge the work intervals onto the drops, split at the bridges.
4. Excel: **Export for Excel** → paste at B2 on My Playlist → **FormatPlaylistPrint** (Playlist Print + Cue Print).

6 — THIS WEEK, OR FROM NOW ON

Just this class	Anything said with a date or "this week" changes only that class.
Every class after	"From now on…" · "Going forward…" · "Until I say otherwise…" — Claude changes the rulebook and tells you what it changed.
Fixed until you say so	RPM beat-locked (1:1 or ½) · 110 RPM ceiling · never stand above 85 RPM · no explicit versions · a gear change only with a zone change · no standing up into a higher zone (climbing once standing is fine) · no interval under 0:15 · the last block ends on a fast flat · hold limits Z5 5:00, Z6 3:00, Z7 0:30 · the BPM band for each block · TSS cap 85.

7 — SAMPLE REQUESTS — COPY ONE AND CHANGE THE BLANKS

- "Build the November 21st class, eight segments. You pick everything: 1980 to 1999, classic rock and new wave, TSS around 80, Single Long Climb this week."
- "Here's my playlist for December 5th, six blocks: [link]. Exportify CSV attached. Map it."
- "Thanksgiving class, November 28th. Six blocks, you pick, food songs, no country. Easy week — keep it to the sheet's RPE, TSS about 68."
- "Fill in the rest for December 12th: Uptown Funk in the Sprints, Africa in the Warm-Up. Eight segments, movie themes on the bridges, 2010 forward."
- "Just the song list first for December 19th: eight segments, Christmas songs from 2000 forward. I'll approve before you map."
- "A 45-minute class for the Y from my Liked Songs (CSV attached). Six blocks. No MOWL file and no Spotify playlist."
- "November 21st: swap song 9 for something faster in the same band and bring the TSS down to 78. Keep the rest."
- "Rebuild this workout from these screenshots as a MOWL file."
- "From now on, use movie themes on the bridges instead of TV shows." — a rulebook change, not a one-off
